EXPERIENCE

10+ years

Lakeside veranda, golden hour — product staged in an evening garden scene, Nubuiten

Measured, modelled, marketable

Drawings measured for approval, models built to real dimensions, and the renders and content that make the work sellable.

01 Nubuiten

PRODUCT & ENVIRONMENT VISUALISATION

Every product modelled to exact scale dimensions and staged in a garden or studio setting — the same models producing the manuals and parts lists.

02 Outdoor Life Group

PRODUCT VISUALISATION

Close to 600 catalogue renders across the group's brands, with a shared scene and material library keeping a wide catalogue consistent.

03 Interior Design, Architectural Visualisation & Documentation

SPACE PLANNING · INTERIOR DESIGN · DOCUMENTATION · VISUALISATION

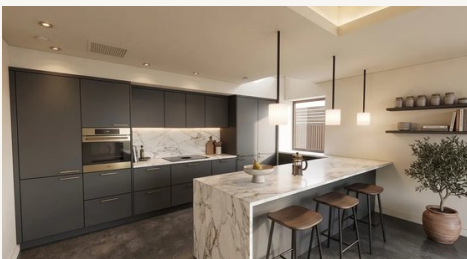

Measured surveys, space planning and interior schemes documented as drawing sets and presented as photoreal visuals.

04 Product Animations

COLLECTION · 3 PROJECTS

Exploded assembly sequences and product films built from the same accurate models as the stills — the step a static diagram cannot cover.

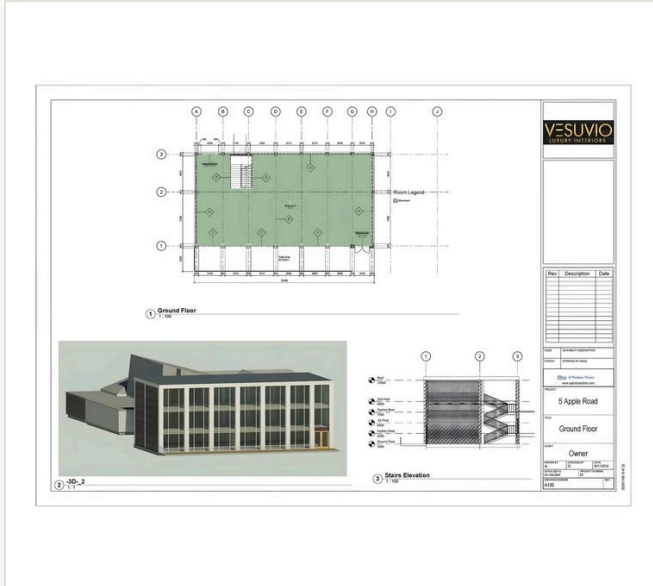

05 AI-Assisted Production

SCENE REVIVAL · PHOTOREAL REGRADES · GENERATIVE MOTION

Existing work brought up to a current standard, and light and atmosphere reworked without rebuilding the scene.

One model, two deliverables

The drawing that builds it and the image that sells it come from the same geometry, so what is approved is exactly what is shown.

DRAWN

Ground floor plan, a 3D study and a stair section on one sheet — accurate technical drawings a contractor can build from.

RENDERED

The same model rendered as a photorealistic street view, adapted for a typical European setting.

Nothing gets redrawn

The approval drawing and the marketing image come out of one model, so the two never drift apart between revisions.

Changes land once

A dimensional change updates the geometry, and both the drawing set and the renders follow from it.

Workshop and webshop

The same source serves the people building it and the people selling it — two deliverables, one build of the model.

"Bringing new services to the company such as 2D and 3D CAD drawings and designs, which have improved communication and understanding of certain contracts tremendously."

Employer's reference — Fixed Cost Property Maintenance, Johannesburg

"I was simply blown away by the workload that Mr Lepley was able to handle yet remaining perfectly pleasant. We were kept well informed throughout and felt extremely valued."

Corporate guest, in a letter to the General Manager — Sheraton Heathrow, London

01

Measured

It starts with a brief. I visit the site and take the measurements myself, or work from drawings supplied by the client, supplier, architect or interior designer — whatever gets the dimensions right.

02

Modelled

I build everything myself — the 3D models, the 2D plans, all the geometry a project needs, drawn accurately and ready to generate content from.

03

Marketable

Renders and animation finished to a high photorealistic standard, ready for online sales, showroom displays and marketing.

SERVICES

3D rendering

Photorealistic stills and 360° panoramic views, across multiple modelling packages and render engines.

2D / 3D drawings

Floor plans, elevations, sections and full drawing sets built to real dimensions.

Product animation

Turntables, exploded assembly sequences and product films from the same accurate models as the stills.
