

# Sam Lepley

## 3D Visualisation & CAD

Photorealistic visualisation and measured CAD drawings for outdoor living, interiors, architecture and product development — from the drawing a workshop builds from to the image that sells it.

THE APPROACH

# Clarity you can build from.

One accurate model serves the whole project. The drawing that gets approved and the image that sells it come out of the same geometry, so the two never drift apart between revisions.

01

### Measured

It starts with a brief. I visit the site and take the measurements myself, or work from drawings supplied by the client, supplier, architect or interior designer — whatever gets the dimensions right.

02

### Modelled

I build everything myself — the 3D models, the 2D plans, all the geometry a project needs, drawn accurately and ready to generate content from.

03

### Marketable

Renders and animation finished to a high photorealistic standard, ready for online sales, showroom displays and marketing.

Interior visualisation — a residential kitchen resolved to material level, Park 24

### 3D rendering

Photorealistic stills and 360° panoramic views, across multiple modelling packages and render engines.

### 2D / 3D drawings

Floor plans, elevations, sections and full drawing sets built to real dimensions.

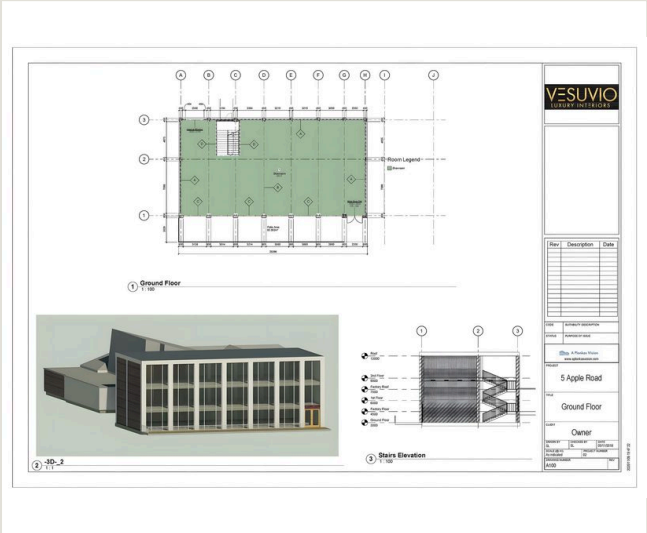

### Product animation

Turntables, exploded assembly sequences and product films from the same accurate models as the stills.

FROM DRAWING TO RENDER

# One model, two deliverables

The same geometry produces the technical drawing set and the marketing image.
A dimensional change lands once and both follow from it.

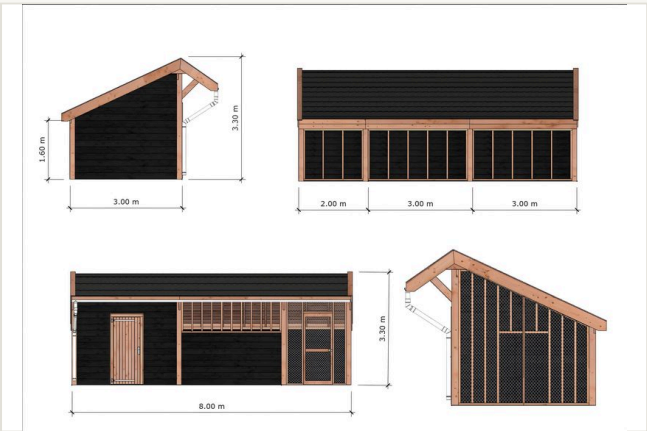

DRAWN

Ground floor plan, a 3D study and a stair section on one sheet — drawings a contractor can build from.

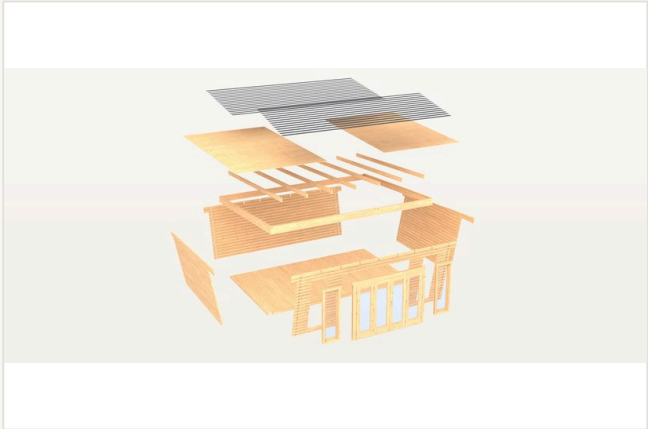

RENDERED

The same model as a photoreal street view, adapted for a European setting.

DIMENSIONED

Elevations carrying real dimensions — the same file that generates the parts list and the manual.

EXPLODED

Assembly sequence pulled apart from the build model — the step a static diagram cannot cover.

### Nothing gets redrawn

Approval drawing and marketing image come out of one model, so the two never drift apart between revisions.

### Changes land once

A dimensional change updates the geometry, and both the drawing set and the renders follow from it.

### Workshop and webshop

The same source serves the people building it and the people selling it — two deliverables, one build of the model.

# 01 Nubuiten

PRODUCT & ENVIRONMENT VISUALISATION

| SECTOR | RANGE | ROLE | YEAR |
|---|---|---|---|
| Outdoor-living webshop | ~10,000 products | Modelling, drawings, rendering | 2024 |

Nubuiten sells verandas, garden rooms and fencing across a range of roughly ten thousand products. Photography could never cover a catalogue that size, and it cannot photograph something that has not been built yet.

Every product is modelled to its exact scale dimensions, then staged in a garden or studio setting. The same models generate the technical drawings, the parts lists and the assembly manuals — so the webshop image and the workshop paperwork are never two separate builds.

Renders make the presales possible: a product can be sold before it is ever built, and far more of the range reaches the site than a camera could ever justify.

Catalogue cut-out and staged scene from one model — the same geometry dressed for the webshop, the garden and the manual.

**BUILT WITH** Modelled to supplied dimensions in SketchUp · drawings and parts lists in LayOut · rendered in 3ds Max with V-Ray

# 02 Outdoor Life Group

PRODUCT VISUALISATION · CATALOGUE SYSTEM

| OUTPUT | REACH | ALSO | YEAR |
|---|---|---|---|
| ~600 renders | Group brands & retail | 3D configurator, AI pipeline | 2026 |

I came across from Nubuiten to take the work over. Each product carried its own requirements — technical drawings, parts lists and manuals through to 2D drawings and 3D renders staged in garden and studio environments. A shared scene and material library keeps a catalogue this wide visually consistent, so products photographed months apart still sit together on a retail page.

Catalogue renders on a shared studio setup — consistent lighting, materials and camera across brands, including exploded views for assembly.

Chestnut fencing rendered in situ — the same library dressed into a real environment rather than a studio backdrop.

**BUILT WITH** Shared scene and material library in 3ds Max · V-Ray · catalogue finishing in Photoshop and Lightroom

ALSO IN THE PORTFOLIO

# Selected work

Documentation sets, architectural visualisation and the motion and AI-assisted production that sit alongside the still work.

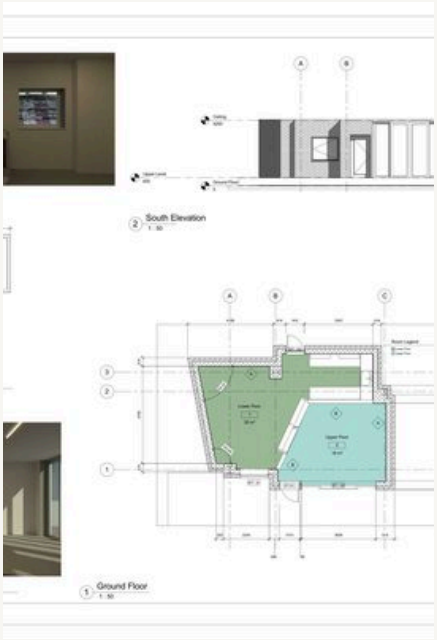

BCD TRAVEL · 2020

Commercial space planning and CAD documentation — office layouts, ceiling plans and elevations as a coordinated drawing set.

5 APPLE ROAD · 2024

As-built architectural visualisation for a returning client, drawn and rendered from survey.

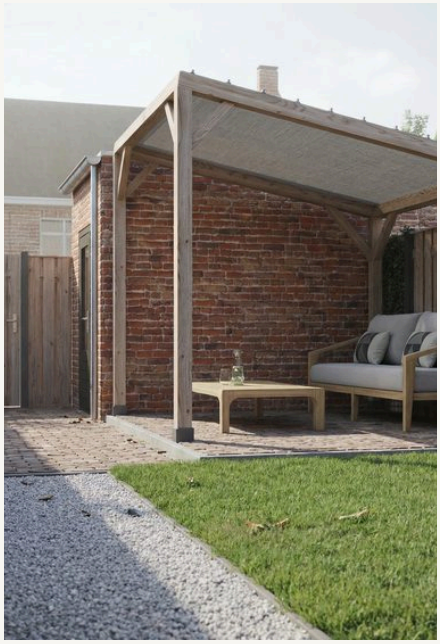

DOCUMENTATION

Survey drawings, plans and elevations issued alongside the visuals on every interior project.

PRODUCT ANIMATION

Turntables, exploded assembly sequences and product films built from the same models as the stills.

SCENE REVIVAL

Existing scenes brought up to a current standard — light and atmosphere reworked without rebuilding the geometry.

STILL TO MOTION

Finished stills extended into short motion pieces for social and product pages.

# 03 Interiors & architecture

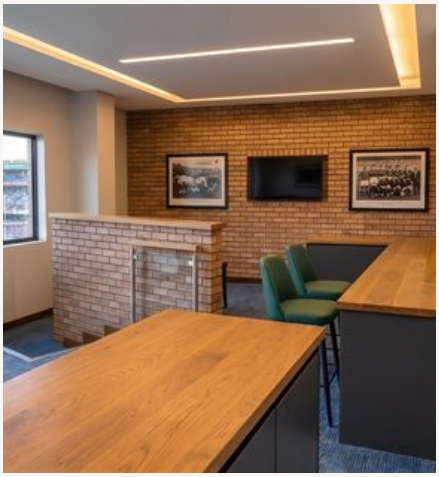

SURVEY · SPACE PLANNING · DOCUMENTATION · VISUALISATION

Measured surveys and space planning documented as full drawing sets, then presented as photoreal visuals a client can approve from. Commercial fit-outs, hospitality interiors and residential renovation.

Boardroom scheme — Schultz Mmuoe Inc

**BUILT WITH** Measured survey on site · drawing sets in AutoCAD and LayOut · visualisation in 3ds Max, V-Ray and Lumion

OLD MUTUAL BOX

Stadium hospitality suite surveyed on site and redesigned from the measurements.

SA BUSINESS COACH

Office scheme carrying the brand palette through into the built interior.

PARK 24 BULKHEADS

Residential interiors staged with people to read at true scale.

Norwegian terrace at night — an imported aluminium pergola, content adapted for the Norwegian market

TOOLS

AutoCAD · SketchUp · LayOut · 3ds Max · V-Ray · Lumion · Photoshop · Lightroom
